MediAI Care+: Standalone Frontend Creation Guide

Complete Architecture, UI Views Code Breakdown & Deployment Steps

Project Module:	Standalone Web Application (React + Vite)
Tech Stack:	JavaScript ES6+, Vite 5.0, Tailwind CSS
Backend Linking:	None (100% Standalone Client-Side Execution)

1. Overview & Setup

The MediAI Care+ frontend is a self-contained web app running 100% in browser DOM memory. It includes symptom prediction, drug interaction checks, outbreak tracking, and ML benchmarks.

2. Frontend Module Summary

View Module	Route Path	Functional Responsibilities
Home View	#home	Hero landing page with system status indicators.
Symptom Analysis	#analyze	Interactive symptom risk prediction engine.
Drug Profiles	#drugs	Multi-drug interaction and dosage checker.
Outbreak Tracker	#outbreak	Epidemiological regional alert dashboard.
ML Benchmarks	#performance	Accuracy visuals & confusion matrix tables.

3. Build & Deployment

• Dev Server: npm run dev (http://localhost:5173)
• Production Build: npm run build (compiles static bundle in dist/)
• Local Preview: npm run preview (http://localhost:4173)
